

eLearning and workshop course

Paediatric Palliative Care

This course has been developed as part of the Quality of Care Collaborative Australia, (QoCCA) Project.

update 2.22

What you will learn

In this elearning course and face-to-face workshop you will learn to confidently care for children with life-limiting conditions, and their families wherever they reside.

To deliver up-to-date evidence-based palliative care and sustain your own practice while working in stressful circumstances.

Requirement

Case-based elearning modules to be completed prior to the workshop, in your own time.

Relevance

All health professionals in hospital and community services that provide care for seriously ill children and their families.

Learning outcomes

On completion of this course, participants will be able to:

- detail the differences between paediatric and adult palliative care
- identify the role of the Paediatric Palliative Care (PPC) specialty service
- discuss physical, psychosocial, spiritual and emotional aspects of care for the child and their family
- define the role of the generalist health professional
- identify evidence based resources in Paediatric Palliative Care
- recognise good communication and participate in simulations.
